

Birthday Card

Six of Spades:

Fate

Characteristics: Indeed it is so much so that a lot of Six of Spades start to believe life as a location where they have limited choices and little power to influence the outcome. There are still a lot of events in life over which we have a huge responsibility, and our options in this life are always important in this regard. It is true that we cannot amend actions once they are in motion, and this is one of the big lessons for the Six of Spades. The Six of Spades is the most powerful representation of the law of cause and effect and is seen as the card of Fate. Regardless of whether it is done for good or ill, we reap what we sow. Six of Spades people can expect there to be events that seem to be fated at different points in their lives. Our actions or things we have said in earlier lifetimes, set events into motion for events experienced later, when situations are correct to create a balancing of those actions. Some of these events can be negative and

harmful and show what it is like to receive such negativity; others are positive and rewarding. Life seems to be extraordinarily fated for the very powerful Six of Spades. This is a person who is here to learn the responsibility of such power. These people either have their power turned on them for their own destruction, or line up with a higher purpose and vision and achieve great success. A strong Neptune influence can mislead a lot of them to go down the highway of escapism and wasted time in fantasy and delusion, but in general, they are very responsible for their actions. Falling into a comfortable or even uncomfortable rut is something they should be alert to. There is a stubbornness about them. Many Six of Spades are destined for supreme achievement, as this card has some of the highest possibility for success and fame of any card. There are glimmers of the big possibility for monetary gain. There needs to be action and a willingness to carry great responsibility, of course, if this is to come to fruition. They find a lot of fulfillment, reason, meaning and friendship through gaining knowledge. Love and romance are their biggest obstacles in this area. Indecision is against them. As dreamers they must be cautious to keep their dreams in sync with higher ideals and morals, otherwise they will become nightmares. Their power can be used to grab the highest dream and utilize it. Completion on each level is guaranteed and if their vision is clear, they are unstoppable.

Relationships: True intimacy while fearful of something, can make it very hard to have a relationship with another until it is seen and admitted. Intelligence and wit are things both genders are attracted to. Wealth, authority or prominence are things the women like. In matters of love they can be sneaky or dishonest and need to avoid catching themselves in their own fantasies and ideas. Thinking about love and romance is something the Six of Spades cannot halt. They have many experiences, both positive and negative, while they collect experience to fortify their notions and ideas at the same time, and this causes them to tend to have a somewhat mental approach to the whole situation. They usually have negative results from being drawn into several relationships. Underlying these attempts at relationships is usually a hidden fear of not getting ample affection.

Personality Connections: Six women are quite alluring to Club men and Diamond men. The Six of Spades would have to assume a back seat in the relationship with a Heart for it to really work, but they do have great connections with them.

Confrontations: In the late 1800, according to many published stories and interviews in newspapers, a Six of Spades could prove that his life was totally fated with a specific destiny. He had, so it was claimed, an ability to foretell without error what cards would be picked from a deck by any person after he knew the time of day and birthday of the person. Hindu astrologers hold the same notion. Fixed principles and laws of mathematics, he claimed again and again, could tell us how the world operates.
